Gray Herbarium
Harvard University

Lincoln Oregon, 19 Jan. 8

My dear Dr Gray:

I have not still some things in my Herb. about which I am not fully satisfied. I send in a small parcel herewith marked "A." One is one of a specimen I took from Prof. Henderson labeled Claytonia Sibirica. Is this C. Sibirica according to Bot. Cal. or a synonym for C. acutifolia. Bong. which I sent you. Ones of E. Oregon are perennials these from Prof. Henderson are annuals, as described in Bot. Cal. and that seems to be about the only difference. What is this now called.

"B. has been called by some
[illegible] marshes meadows. –
The species is not mentioned in Bot Cal – The genus only mentioned – to which I have some idea to which it is in bl or not.
– Is a stout plant 4–6° & much branched from the root. – Leaves & bracts. – Stem very stream banks.
"C." Suspicious a Mertensiana I thought the same & mentioned it as such. but no mention is made of the ovaries being reflexed upon the pedicels. – a very peculiar mark. – They were got – a few – in the high Powder River mts. – the last season & I have to cut one out of the sheet – having no duplicate
Yours truly
Wm. C. Cusick.
